

PSTC Lab Report

Week-1

Title: Week 1 programming practice Basic c programming

Aim:

To understand and implement the basic concept of c programming using variables, data types, input output function, operators, conditional statements, switch statements, and simple problem-solving techniques.

Objective:-

- ⇒ Learn the use of variables and different data types.
- ⇒ perform arithmetic, relational and logical operators.
- ⇒ Implement decision-making using if-else and nested if-statements.
- ⇒ use switch statements for menu-driven program.

Program I had worked through this lab:

1. Level-1

In this level-1, I had worked on the basic programs of c language, i.e. Even or odd program

, positive, negative or zero, character type

Identification, Leap year program, By these

Programs we can understand the language in

the better way.

2. ~~Week 2~~ Level-2

⇒ In this level, performs arithmetic operations based on the user's menu choice using a 'switch' statement, Swaps two numbers, using arithmetic operations without an extra variable. Swap using temporary variable, perfect square, student grade.

3. Level-3

⇒ In this level, we ~~look~~ understand these programs i.e. Menu program with error handling, largest among three numbers, Grade point to letter grade.

Learning outcomes:-

- ⇒ Understood the syntax and structure of C programs
- ⇒ Learned to solve simple logical problems using conditional statements.
- ⇒ Gained experience with arithmetic and logical operators.
- ⇒ Developed confidence in writing and testing C programs.

Conclusion:-

The week 1 programming practice helped in building a strong foundation in C programming. The programs understanding of basic programming concepts, logical thinking and problem-solving skills which are essential.
